## **ADEQ Director Owens Announces Asbestos Awareness Seminar to be Held Friday, Aug. 15 in Kingman**

PHOENIX (Aug. 12, 2008) -- Arizona Department of Environmental Quality Director Steve Owens announced today that ADEQ will conduct the third of a series of Asbestos Awareness Seminars on Friday, Aug. 15 in Kingman to help demolition and renovation contractors and small communities comply with asbestos regulations.

ADEQ, in partnership with the Arizona chapter of the Environmental Information Association, conducted two other Asbestos Awareness Seminars earlier this year in Holbrook and Clarkdale.

These seminars are free but registration is required. Registration for the seminar in Kingman -- which will be held from 8 a.m.-4 p.m. at City of Kingman Council Chambers, 310 N. Fourth Street -- is required before 5 p.m. Wednesday, Aug. 13. For additional information, please visit [www.eia-az.org](http://www.eia-az.org) or contact ADEQ at [asbestos@azdeq.gov](mailto:asbestos@azdeq.gov).

Director Owens launched the Route 66 Asbestos Initiative last October to address potential asbestos problems in small communities throughout Arizona and ensure that asbestos-containing material is handled and disposed of properly.

"Many communities across the state have older buildings they want to preserve, renovate or even demolish that contain asbestos," Director Owens said. "This is especially true in Kingman, where there are a number of historic buildings. If asbestos is not handled properly during a renovation or demolition, it can present a huge risk to public health, as well as cause the site to become contaminated. Through the Route 66 Initiative we are providing technical assistance to communities to ensure that asbestos is dealt with safely and properly and, if there is contamination, find ways to help the community clean up the site."

Owens noted that as part of the asbestos initiative, ADEQ has designated an outreach specialist in its air-quality division to provide technical assistance and asbestos education to rural communities.

"We want local officials to contact us if they have any questions about potential asbestos problems in their communities," Owens said. "We also want them to alert us about any improper demolition or renovation activities that can present a risk of asbestos exposure to people."

Asbestos seminar

2 – 2 – 2

The seminars are designed for contractors but are open to anyone seeking information about compliance with the asbestos regulations.
